

## Color Chart(2009)

## ■ Coating

### ■ PE(polyester) Coating

PE(polyester) coating: high molecular polymer as monomer and addition of alkyd, is an UV-resistant coating. It can be classified matt and glossy according to coating gloss. The compact molecule structure, makes paint surface luster and smooth which assure good printing on the panel surface. With an warranty of 8-10 years for weather resistance, it is specially applied for internal decoration and sign board.

### ■ PVDF(fluorine-carbon) Coating

PVDF(fluorine-carbon) coating :made of fluorine carbon resin, pigment, ester solvent, after high temperature roasting and baking, the paint is solidified to dry film with super weather resistance. PVDF coating also can be classified as traditional PVDF and nanometer PVDF coating.

A Traditional PVDF Coating, with KYNAR500 PVDF, two or three times for coating and baking, has good properties of anti-acid, anti-alkali and is durable in atrocious weather and environment, keeping 15 years no unwonted fading. In view of these facts, we recommend this panel applied for external wall cladding.

B Nanometer PVDF Coating, which different with traditional PVDF is the clear coating. It contains nanometer element, which can protect panel from pollution, Because nanometer has self-cleaning effect, It easy to get rid of dust and pollution by raining or water.

### Chameleon Colors Coating

- Add pearl talc into PVDF paint(>70% PVDF), depending upon the pigment type and viewing angle, different wavelengths of light are reflected, refracted and diffracted to the audience resulting in an ever-changing color gradient with iridescent highlights. It is widely used for public internal and external, multiple shops, exhibitions and so on.

### Nacreous coating

Nacreous coating is formed by adding one more layer of nacreous paint on the basis of high-quality PE coating, and the surface glossiness is around 90° „ ° £The combination of glossy coating and nacreous coating makes the panel surface brilliant when the light irradiate on the panel. Premium material particularly applied to curtain wall construction, indoor as well as outdoor decoration, exhibition display, commercial chain system and signage. It is an excellent choice for the places which highly demand the surface glossiness. The weather resistance tenor is eight to ten years

### FEVE Coating

Which is a high quality paint for one or more coatings, with polyurethane as base, fluor polymer as top coating to keep its good weather resistance of 10 years. Compared with PVDF, it guarantees more fresh and vivid color and high gloss retention. Its creativity and individuality offer unlimited possibilities for the planner. It is available in colors that are not feasible with other coating systems.

### ■ Special Colors Coating

A Brushed panel, which are made some special process on natural aluminum, presents the nature and beautiful appearance together with modern and elegant.

B Granite panel can be processed by film-sticking and painting. The former means stick one layer of film with granite pattern, it is very easy. And the latter is painted and roasted for three or four times with a better weather resistance.

C Mirror finish panel, which need anodic oxidation finishing on aluminum surface, the finishing makes the surface like mirror. It is more safely using and processed to all shapes.

D Two colors in one sheet. We renew the coating system and technology and break the national single color to appear two different colors in same panel, it offers more , more imagine and creativity.

## Service Procedures

The customers provide custom color sample

We Provide new paint color sample

The customers issue written confirmation after receiving color sample

Order and Production

## Brief Introduction

Standard colors: more than 70 colors

Not standard colors can be customized according to customer's requirements

## Color Match

For custom color request, we can deal as following

- 1 Supply a physical sample of custom color. A color sample on metal is preferred, but if other, it is also acceptable, but the color matching rate maybe not good as color on metal.
- 2 New color sample is usually offered by our paint supplier in 5-7 days, special color should be in 7-10 days.
- 3 Upon receipt of color sample, please approve in writing as soon as possible. Once you approve, we will arrange purchasing and production.

- Color difference maybe occurred in different production batch, so it is suggested all panel are placed in one order for same project. And keep same direction as arrow on protective film when installing to avoid any color difference by vision.
